

THE STABILITY YOU NEED **THE RIDE YOU WANT**

INTERNATIONAL® WORKSTAR®

Air Link® Tandem Drive Suspension

The Air Link® Tandem Drive Suspension is a unique combination of air spring and walking beam technology, delivering everything you demand in a heavy duty tandem drive suspension – high roll stability and superior traction when the load is full, without the bone-jarring ride when empty.

Originally constructed to meet the requirements of the logging industry, the Air Link® is the only air spring suspension designed specifically for the demands of fire and rescue, logging, refuse, heavy haul, redi-mix, cranes, military, and any other severe service on/off highway vehicles. Air Link® exceeds industry requirements for vocational suspension applications, while lowering operating and maintenance costs, limiting damage to chassis and mounted equipment, diminishing vibrations, lengthening tire life, extending suspension and bushing life and reduce downtime.

driven to *outperform*™

WALKING BEAMS

Provide even weight distribution between axles for maximum traction.

DUAL HEIGHT CONTROL VALVES

Maintains optimum ride height independent of load and levels vehicle side-to-side.

AIR SPRINGS

Offer a smooth ride - on road or off - loaded or empty; internal stops allow suspension to function if air loss occurs.
